

Efficient, Economical, Ultra Portable

Our entry level fire simulator Flicker is the lightest, most cost-effective model offered. The 40" x 25" (100cm x 65cm) training screen is great for smaller venues!

Easy, and versatile indoor fire safety training

Pyrosoft's Flicker model is the most flexible option for purchasing a fire extinguisher simulator. This model is great for organizations that are looking to add to their existing fire extinguisher safety training program with hands on experience, or ones who already own a suitable laptop or projector.

Flicker comes with four (4) preloaded fire scenes to practice putting fires out on, additional fire scenes can be loaded upon request. While the participants fight their fires, the trainer can review important data such as the current attempt time, or if the nozzle is being squeezed correctly. Difficulty levels can also be managed if the students are putting the fires out quickly.

Optional Notebook/Projector

Pyrosoft offers a dedicated projector and notebook, complete with the basic version of our Crossfire program and classroom module.

Already have your own set up? Inquire about the Flicker wireless option.

Ultra-Portable & Storage Friendly

Flicker's wheeled lightweight Pelican case is the key to making this our lightest and most compact fire simulator by contributing only a few pounds to the total shipping weight.

Upgradeable

Your investment is never obsolete! As the software improves, so will your fire simulator.

Flicker is also the perfect start for companies looking to experience fire simulation before moving up to an even more feature rich model.
